DIAM seeks to quickly adapt to the major technological changes that are being witnessed in the world. All its operations are based on a true reading. Water bill will be calculated based on the data transferred by the smart meter. The process of reading water meters remotely, after the completion of the electronic service system, will provide all the advantages of the smart meter is that it reduces discretionary readings and take them automatically, relying on the Internet and the latest technologies in the world. This application transfers data quickly, as it is one of the revolutions of artificial intelligence.
