Water security is the lifeblood

WATER is one of the most important resources that no one can live without. Water is the lifeblood and an important source on which many aspects of life depend. Life cannot continue without the existence of this basic resource. In order for man to reach it, there are efforts made, plane developed, strategies implemented, financial resources spent and staff working to deliver it easily to everyone living on this good land.

In order to enhance water security, the Public Authority for Water (Diam) works to overcome all obstacles to contribute to its pioneering role, on which everyone is dependent to live comfortably and easily. Everyone can see the extent of effort and work done by Diam to expand desalination plants and water networks distributed all over the Sultanate. All these efforts are made for the comfort and welfare of all citizens and residents, so that water will reach them despite all challenges and obstacles.

Diam's efforts and endeavors reflect the reality through which we see the extent of keenness to provide water to consumers in accordance with each stage of construction. We find this role in the hands of the Public Authority for Water as being an imperative authority to provide water. It is considered a basic pillar to be adopted within the foundations of modern life aimed at upgrading the quality of life. Anyone who keeps following will be aware of the role that the Public Authority for Water plays to enhance all capabilities to keep pace with modern life and opening effective channels to achieve desalination plants in most of the Sultanate, which will meet the consumers' needs everywhere in the Sultanate.

The efforts exerted by the Public Authority for Water (Diam) enhance its active role through existing projects, including building desalination plants and linking artisans wells to obtain water to areas that have not been served. This in itself indicates the extent to which the capabilities are harnessed to provide water services.

Desalination plants are the strategic stations for providing high-quality potable water. Water is currently produced from the existing plants, with the combination of construction of new plants, which Diam has been established in accordance with the Sultanate's development strategy to cover 98% of the Sultanate's population in 2040 and achieve water security all over the Sultanate: Musandam Governorate, Al Wusta Governorate, North and South Al Batinah Governorates, Al Batinah Governorates, Al Dhahirah Governorates, and Muscat Governorates.

Diam also purchased production capacity from some of the small desalination plants operated by the Rural Areas Electricity Company (Tanweer) in the governorates of South Al Batinah and Al Dakhiliyah, and linking a number of large desalination plants and small desalination plants to the main water transport network.

Diam is going on in accordance with every stage of construction. We find this role at the top of the priorities adopted by Diam providing water to consumers in accordance with every stage of construction. We find this role at the top of the priorities adopted by Diam providing water to consumers in accordance with every stage of construction.

The efforts exerted by the Public Authority for Water (Diam) work to overcome all obstacles to contribute to its pioneering role, on which everyone is dependent to live comfortably and easily.
